

UNIQUE® Asphalt Resurfacer Applications
Karl Rohrer & Associates Cuyahoga Falls, Ohio
July 1-3, 2020

Karl Rohrer and Associates is an engineering firm located in Cuyahoga Falls, Ohio, on a multi-purpose property with daily automobile and truck traffic.

This property has multiple asphalt and concrete pavements ranging in various ages and pavement conditions. UNIQUE Paving Materials Corp. conducted a UNIQUE® Asphalt Resurfacer demo in the fall of 2019.

UNIQUE® Asphalt Resurfacer was used on the old and extremely alligatored asphalt pavements.

The resurfacer was applied directly from the tote onto the pavement and squeegeed out across the surface.

The material was put down on a sunny, 90° F day and was curing to the touch in less than two hours.

Just like UNIQUE's KOLD-FLO® crack filler, be sure to squeegee off all excess material (shown above under the arrow in the right picture) or the resurfacer remaining on the pavement may lead to tracking.

UNIQUE® Asphalt Resurfacer four days later.

One week after the material was put down.

Three weeks later.

Other areas also three weeks later.
